Internship program	3
3 rd May2021: Introduction to EPC Industry	4
4 th May2021: Engineering documentation for EPC projects.....	5
5 th May2021: Engineering documentation for commands and formulae	6
7 th May2021: Engineering documentation for Electrical system design	7
10 th May2021: Engineering documentation for Typical diagrams	8
11 th May2021: Classification of Transformers and Generators	9
12 th May2021: Classification of Switch gear construction and power factor improvement	10
17 th May2021: Detailing about UPS system and Bus ducts	11
18 th May2021: Detailing about Motor Starters and Sizing of motors.....	12
19 th May2021: Describing about Earthing system and Lighting Protection.....	13
20 th May2021: Lighting or illumination systems and calculations	14
21 th May2021: Lighting or illumination systems using DIALUX software.....	15
24 th May2021: Cabling and their calculations and types.....	16
25 th May2021: Cabling calculations and Cable gland selection	17
28 th May2021: Load calculations and Transformer sizing calculations	18
29 th May2021: DG set calculations.....	19
2 nd June2021: Calculations of Earthing and Lighting protection	20
5 th June 2021: Cable sizing and cable tray sizing calculations	21
Conclusion.....	22
Feedback.....	22

Introduction

Internship program arranged by GUDLAVALLERU ENGINEERING COLLEGE in association with Smart Internz, Hyderabad for the benefit of 3rd year EEE batch 2018-2022 on Electrical Detailed design Engineering for Oil& Gas, Power and Utility industrial sectors.

Program organizer

Smart Bridge, Hyderabad.

Pioneer in organising Internships, knowledge workshops, debates, hackathons, Technical

sessions and Industrial Automation projects.

Courtesy

Dr. Sri B. Dasu – HOD – EEE, GEC

Mr. G. Srinivasa Rao – Internship coordinator

Mr. Ramesh V - Mentor

Mr. Vinay Kumar - System Support

Mr. Harikanth – Software/Technical Support

Program details

Smart Internz program schedule: 4 weeks starting from 3rd May 2021

Daily schedule time shall be 4PM to 6.30PM

Mode of Classes: On line through ZOOM

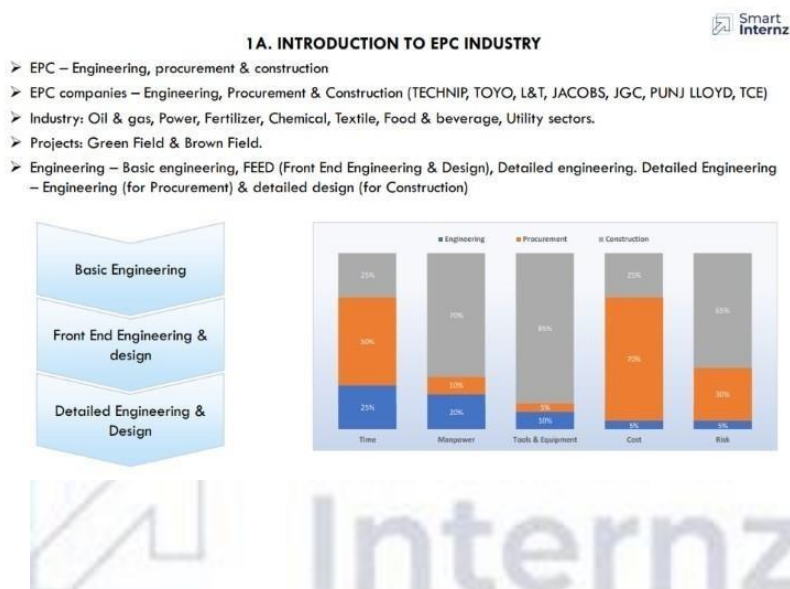

Presenter: Mr Ramesh V

Internship program

We have been given the opportunity to learn and interact with industry experienced engineering specialist to learn the Electrical detailed design engineering for various industrial sectors.

3rd May 2021: Introduction to EPC Industry

1	EPC Industry & Electrical Detailed Engineering	EPC Industry	Introduction
		Engineering	Types of Engineering
		Procurement	Engineering role in procurement
		Construction	Engineering role during construction

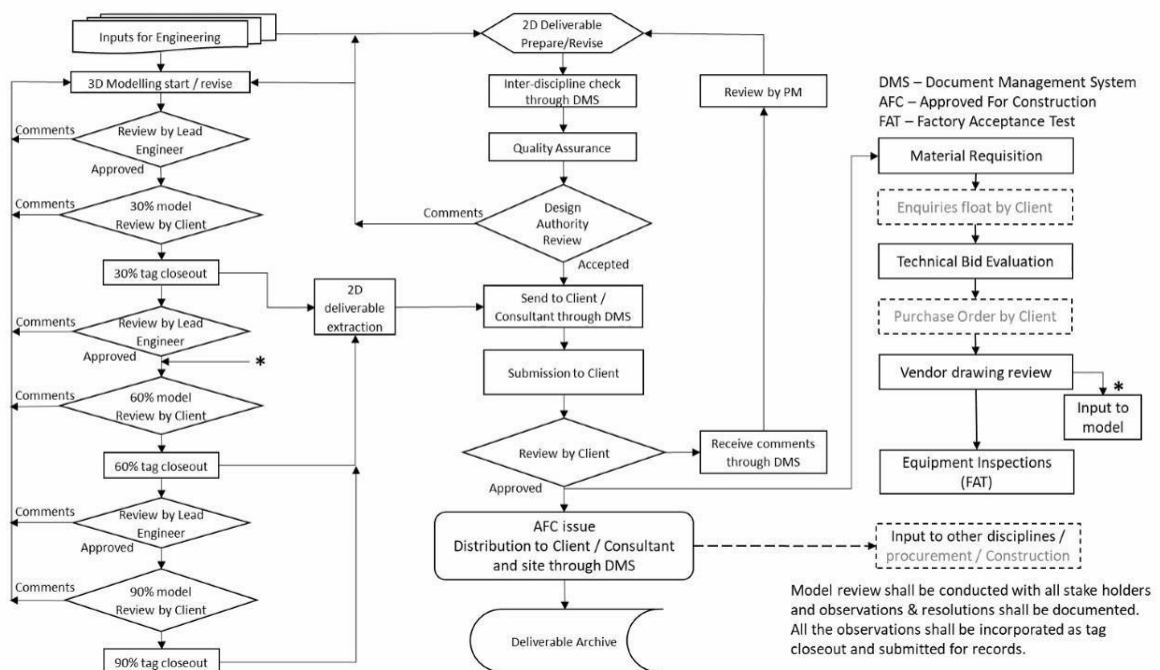

Topic details:

Engineering phases, Engineering deliverables (drawings & documents) list, Design Engineer role at various phases of project.

4th May2021: Engineering documentation for EPC projects

2	Electrical Design Documentation	Engineering Deliverables list	Sequence of deliverables
		Detailed Engineering work flow	Detailed engineering process
		Document transmission	Document submission and info exchange
		Deliverables types	Different types of deliverables

3. ELECTRICAL DESIGN & DETAILED ENGINEERING - PROCESS

Topic details:

Engineering deliverables list, detailed engineering flow, engineering support flow, engineering support to procurements.

5th May2021: Engineering documentation for commands and formulae

3	Document & Drawing tools	MS Word	Report / Calculations formats
		MS Excel	Basic excel commands
		Auto cad	Basic line diagrams and layout commands

3C. AUTOCAD BASIC COMMANDS

AUTOCAD BASIC KEYS							
STANDARD		DRAW		MODIFY		FORMAT	
NEW	Ctrl+N	LINE	L	ERASE	E	PROPERTIES	MO
OPEN	Ctrl+O	RAY	RAY	COPY	CO	SELECT COLOR	COL
SAVE	Ctrl+S	PLINE	PL	MIRROR	MI	LAYER	LA
PLOT	Ctrl+P	3DPOLY	3P	OFFSET	O	LINETYPE	LT
PLOT PREVIEW	PRE	POLIGONE	POL	ARRAY	AR	LINEWEIGHTS	LW
CUT	Ctrl+X	RECTANGLE	REC	MOVE	M	LT SCALE	LTS
COPY	Ctrl+C	ARC	A	ROTATE	RO	LIST	LI
PASTE	Ctrl+V	CIRCLE	C	SCALE	SC	DIMEN. STYLE	D
MATCH PROPE.	MA	SPLINE	SPL	STRECH	S	RENAME	REN
CLOSE	Ctrl+F4	ELLIPSE	EL	TRIM	TR	OPTION	OP
EXIT	Ctrl+Q	BLOCK	B	EXTENDED	EX		
		POINT	PO	BRAKE	BR		
		HATCH	H	CHAMFER	CHA		
		GRADIENT	GD	FILLET	F		
		REGION	REG	EXPLODE	X		
		BOUNDARY	BO				
		DONUT	DO				

EXTRA				DRAFTING		PAPER SIZE
UNIT	UN	UCS	UCS	ORTHO	F8, Ctrl+L	A4=210*297
LIMITS	LIMITS	SINGLE TEXT	DT	OSNAP	F3, Ctrl+F	A3=297*420
(0,0; 1000,1000)		MULTILINE TEXT	MT	POLAR	F10, Ctrl+U	A2=420*594
ZOOM	Z	EDIT TEXT	ED	GRID	F7, Ctrl+G	A1=594*841
ALL	A	OBJECT SNAP	OB	OTRACK	F11	A0=841*1189
PAN	P	DIMENTION	DIM	SNAP	F9	
CLEAN SCREEN	Ctrl+0	HORIZONTAL	HOR			
COMMAND WIN	Ctrl+9	VERTICAL	VER			

Topic details:

Here we need to learn the basis of the auto cad basic keys like standard, modify, draw, format, papersize etc..

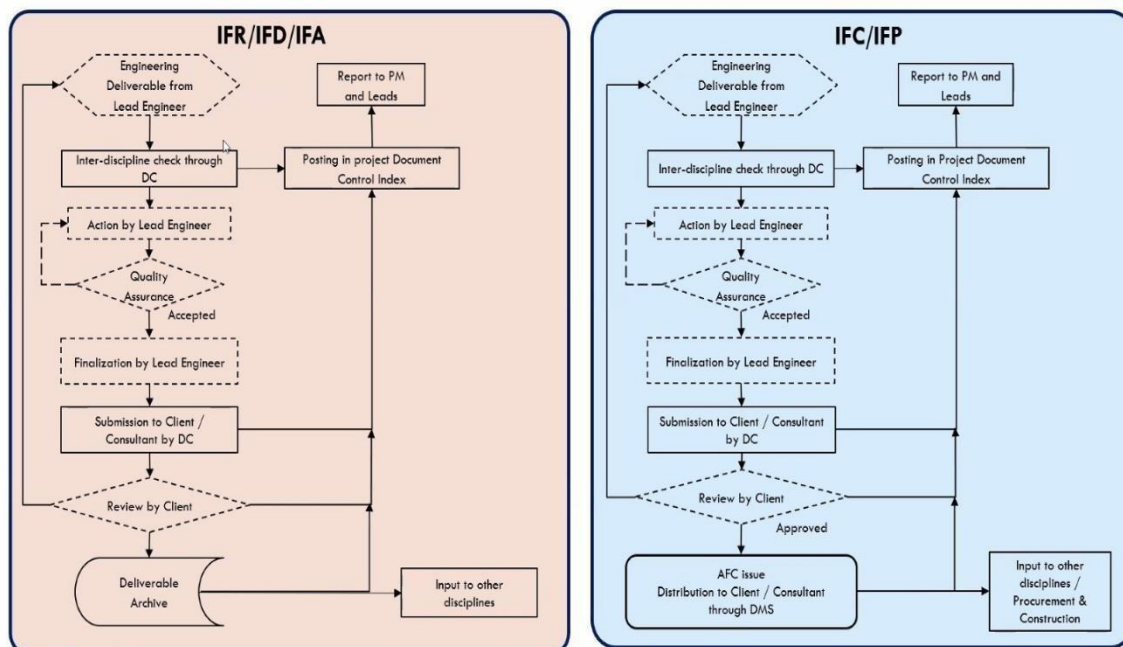

7th May2021: Engineering documentation for Electrical system design

4	Electrical system design for a small small project	Overall plant description
		Sequence of approach
		Approach to detailed design

Topic details:

1C. DETAILED ENGINEERING

Here we observed that how to do a project and Sequence of approach, Approach to detail design and Overall plant distribution system.

10th May2021: Engineering documentation for Typical diagrams

5	Electrical system design for typical diagrams		
		Load lists schedule	Power flow diagram
		Single line diagram	Typical schematic diagram

Sl No	Equipment No.	Description	EQUIPMENT	Dr. Supply	VMA	Essential	Non-essential	Capacity	Equipment rating				Efficiency of load motor %	Power factor of load motor	Calculated Load				Remarks	Status
									kW						kVA					
									FA	FB	FC	FD			FA	FB	FC	FD

11th May2021: Classification of Transformers and Generators

6	Classification of Transformers and Generators	Different types of Transformers	Different types of Generators
---	---	---------------------------------	-------------------------------

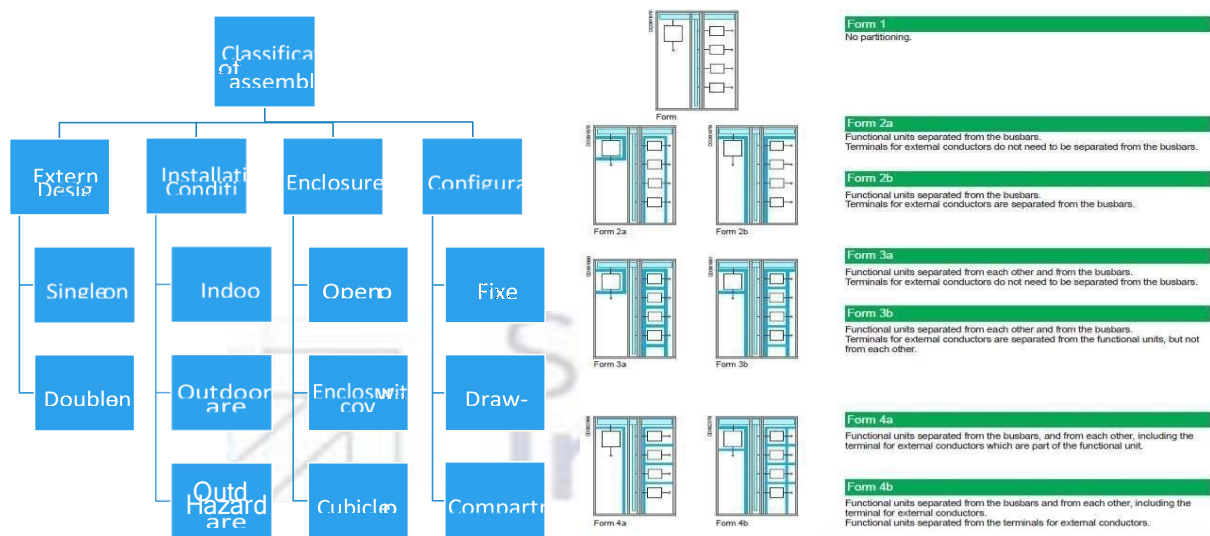

Topic details:

Classification of Transformers and Generators

12th May2021: Classification of Switch gear construction and power factor improvement

7	Classification of Switch gear construction and power factor improvement	Different types of Switch gear assemblies	Power factor improvement
---	---	---	--------------------------

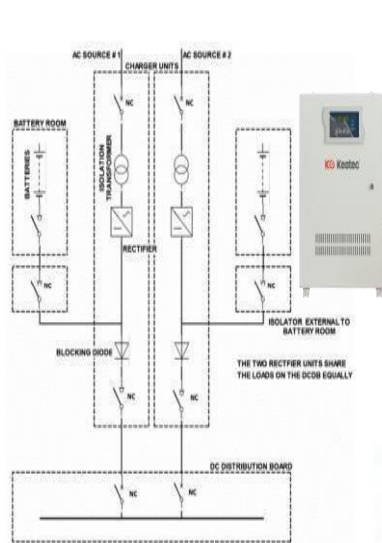

Topic details:

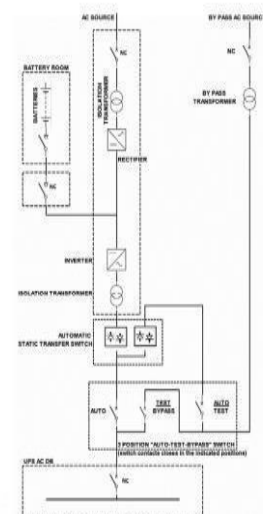

Classification of Switch gear construction and Power Factor Improvement

17th May2021: Detailing about UPS system and Bus ducts.

8	Detailing about UPS system and Bus ducts	Uninterruptible power supply system	Busduts of the system
---	--	-------------------------------------	-----------------------

110V or 220V DC
UPS System

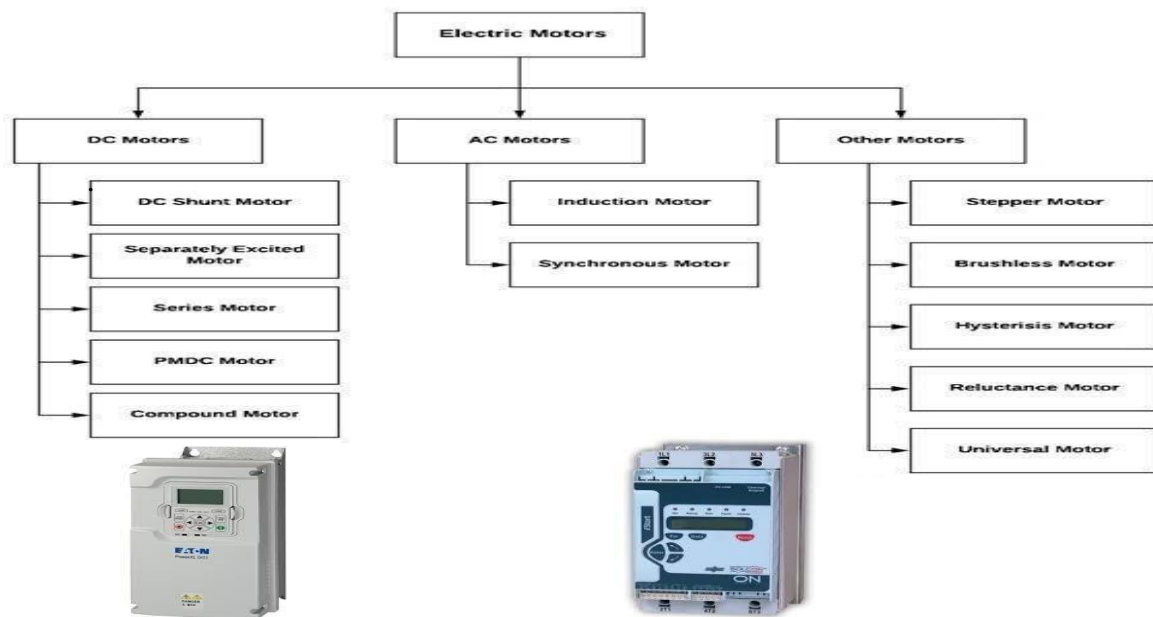

110V or 230V
AC UPS System

Topic details: Power distribution of UPS system and Bus ducts.

UPS systems are designed to provide continuous power to a load, even with an interruption or loss of utility supply power. UPS generally involves a balance of cost Vs need.

18th May2021: Detailing about Motor Starters and Sizing of motors.

9	Detailing about Motor Starters and Sizing of motors	Motor starters and drives	Sizing and selection of motors
---	---	---------------------------	--------------------------------

Topic details: Detailing about Motor Starter and Sizing of motors and their selection.

The principal function of a motor starter is to start and stop the respective motor connected with specially designed electromechanical switches which are similar in some ways to relays. The main difference between a relay and a starter is that a starter has overload protection for the motor that is missing in a relay.

Different types of motor starters are as follows:

- Direct-On-Line Starter
- Rotor Resistance Starter
- Stator Resistance Starter
- Auto Transformer Starter

19th May2021: Describing about Earthing system and Lighting Protection.

10	Describing about Earthing system and Lighting Protection.	Plant Earthing system	Lighting Protection materials
----	---	-----------------------	-------------------------------

Topic details: Describing about Earthing system and Lighting Protection.

Lightning protection required for high rise structures and important buildings against lightning currents during thunder storms. Primarily Lightning protection system calculations are done based on soil resistivity, conductor material, coverage structure / Building to determine whether lightning protection is required or not

20th May2021: Lighting or illumination systems and calculations.

11	Lighting or Illumination systems and Calculations	Lighting or illumination systems	Lighting calculations
----	---	----------------------------------	-----------------------

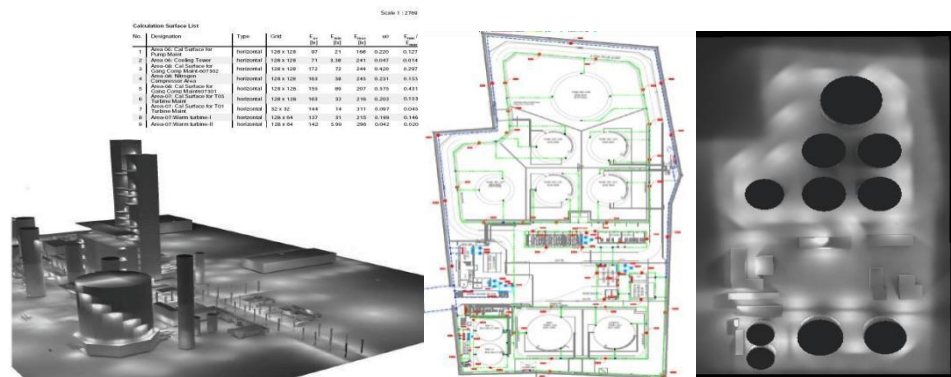

Topic details: Lighting or Illumination systems and Calculations.

All outdoor lighting fittings shall be connected with armoured PVC cable of suitable no. of cores and size. Necessary type and no. of junction boxes shall be provided for branch connections. Indoor light fittings shall be connected with FRLS PVC wires laid in cable trunks or conduits.

Inputs required: Equipment and cable routing layouts, lighting calculations, Design basis for type of light fittings to be used, required lux levels

Lighting calculations software: Dialux, Chalmrite, Calculux, Relux, Luxicon, CG

Lux Applicable Standards: IS 6665: Code of practice for industrial lighting, IS

3646: Code

of practice for interior illumination, IEC 60598: Luminaires, IEC 62493: Assessment of lighting equipment related to human exposure to electromagnetic field

Deliverables: Indoor Lighting layouts, socket outlet layouts, Street lighting and area lighting layouts. BOQ.

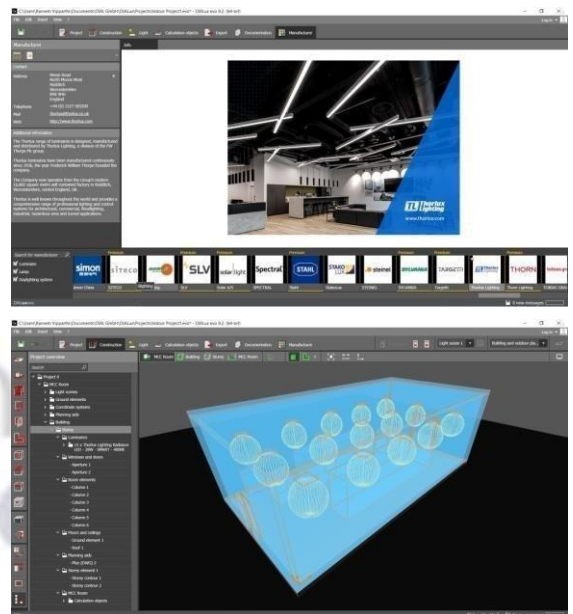

Types of light fittings: Industrial, flame proof type (EX d), increased safety type (Ex e).

21th May2021: Lighting or illumination systems using DIALUX software.

12	Lighting or Illumination using DIALUX software	Lighting or illumination systems	Operation of dialux software
----	--	----------------------------------	------------------------------

Topic details: Lighting or Illumination Calculations using DIALUX software.

Here we are using this Dialux evo 5.9.2 software windows to construct the power plant and we can perform the operation from this software.

24th May2021: Cabling and their calculations and types.

13	Cabling and their Type and calculations	Cabling calculations	Types of cabling materials
----	---	----------------------	----------------------------

Topic details: Cabling and their types and calculations .

Electrical cables must be properly supported to relieve mechanical stresses on the conductors, and protected from harsh conditions such as abrasion which might degrade the insulation.

Cables generally laid in the cable trays above ground, direct buried underground and in metallic or PVC conduits. Derating factors may be applicable for each type of cable laying conditions.

25th May2021: Cabling calculations and Cable gland selection.

14	Cabling calculations and cable gland selection	Cabling calculations	Cable gland selection
----	--	----------------------	-----------------------

Topic details: Cable sizing calculation and cable gland selection.

Inputs required: Load List, Design basis, Electrical equipment layout, cable schedule, vendor catalogues for cable tray.

Cable tray sizing shall be performed for each branch of cable tray routing up to the load point. Results shall be checked with specified limits mentioned in design basis.

Cable gland:

Transformer Calculations:

Calculation for Transformer Capacity

1.0 Example of calculation for Transformer Capacity:

1.1 Calculation for consumed load
Consumed loads used for this example are as follows:

	kW	kVar	kVA	
a. Continuous load	216.4	182.5	284.25	(i)
b. Intermittent load / Diversity Factor	7.25	5.6	9.64	(ii)
c. Stand-by load required as consumed load	65.73	55.0	86.73	(iii)

Max. Consumed load = (i) + 50% (ii) + 10% (iii) = 227.1 kW, 188.1 kVar, 295.86 kVA

Future expansion load (20% capacity) = 15.1 kW, 12.5 kVar, 19.8 kVA

Total Load = 242.2 kW, 200.6 kVar, 315.66 kVA

1.2 Calculation for 33kV/0.433kV transformer capacity

Max. Consumed load = 295.8 kVA
Span capacity = 59.2 kVA
Required capacity = 355.1 kVA
Transformer rated capacity = 120 kVA

1.3 Voltage regulation check

During starting or reacceleration of max. capacity motor (3400 kW), while all the other loads running, the voltage regulation is as follows:

$P = 355 \text{ kVA}$ (127) = 4.12 (4.12) = 1.801 %

Hence $\Delta V\%$ = 1.801 %

$\Delta V\%$ = 1.801 %

$P_u = 45 \text{ kW}$ having $\cos \phi = 0.8$ & $\Delta C = 1$ & $\cos \phi = 0.78$ & $\Delta C = 0.91$ & $\cos \phi = 0.85$

$P_L = 360.4 \text{ kVA}$

$\cos \phi = 0.85$ Corresponding Angle $\phi = 31.78^\circ$ for which $\sin \phi = 0.52$

$P_u = 360 \text{ kVA}$ & P_L in kW is = 223.6 & P_u in kVar = 205.11 & $\cos \phi = 0.85$

$\cos \phi = 0.85$ Corresponding Angle $\phi = 31.78^\circ$ for which $\sin \phi = 0.52$

$P_u = 316.8 \text{ kW}$

$P_L = 625.4 \text{ kVAR}$

$P_L = 750.5 \text{ kVA}$

$\cos \phi = 0.85$ where $\sin \phi = 0.52$

Voltage Regulation = 7.8 %

1.4 Selection of rated capacity
120 kVA transformer selected.

29th May2021: DG set calculations

Topic details:

Transformer and DG set calculations,types ,sizing or selections.

DG SIZING CALCULATIONS	
Design Data	
Rated Voltage	415
Power factor (Cos ϕ)	0.87
Efficiency	0.74
Total operating load on DG set in kVA at 0.87 power factor	287.3
Largest motor to start in the sequence - load in KW	45
Running kVA of last motor (Cos ϕ = 0.91)	70
Starting current ratio of motor	6
Starting KVA of the largest motor (Running kVA of last motor X Starting current ratio of motor)	419
Base load of DG set in KVA (Total operating load in kVA – Running kVA of last motor)	217
A Continuous operation under load -P1	
Capacity of DG set based on continuous operation under load P1	217
B Transient Voltage dip during starting of Last motor P2	
Total momentary load in KVA (Starting KVA of the last motor+Base load of DG set in KVA	637
Subtransient Reactance of Generator (Xd'')	7.91%
Transient Reactance of Generator (Xd')	10.065%
$X_d''' = (X_d'' + X_d')/2$	0.089875
Transient Voltage Dip	15%
Transient Voltage dip during Soft starter starting of Last motor P2 = Total momentary load in KVA x $X_d''' \times \frac{(1 - \text{Transient Voltage Dip})}{(\text{Transient Voltage Dip})}$	324
C Overload capacity P3	
Capacity of DG set required considering overload capacity	
Total momentary load in KVA	637
overcurrent capacity of DG (K)	150%
(Ref: IS/IEC 60034-1, Clause 9.3.2)	
Capacity of DG set required considering overload capacity (P3) = $\frac{\text{Total momentary load in KVA}}{\text{overcurrent capacity of DG (K)}}$	425
Considering the last value amongst P1, P2 and P3	
Continuous operation under load -P1	217
Transient Voltage dip during Soft starter starting of Last motor P2	324
Overload capacity P3	425
Considering the last value amongst P1, P2 and P3	425
Hence, Existing Generator 425 KVA is adequate to cater the loads as per re-scheduled loads	
NOTE:VOLTAGE DIP CONSIDERED - 15%	

1. Maximum allowable temperature for copper conductor, in °C	80
KD - Factor at 80°C	253
This data taken from IEEE 80-2000, Clause 1.1.3, Table-1 for clad steel rod:	
1.6 - Ac *	0.123
Ac - Required conductor cross section in sq. mm	130
Earth flat area in mm	1.3
Earth flat area (including 25% corrosion allowance) in mm	1.6
Selected flat size Ve * This in sq. mm	20
Rg - Grid resistance	
Grid resistance can be calculated using Eq. 52 of IEEE 80	
$R_g = \rho \left[\frac{1}{L} + \frac{1}{\sqrt{31 \times A_g}} \left(1 + \frac{1}{1 + \sqrt{31 \times A_g}} \right) \right]$	
p - Soil resistivity in Ω-meter	11
L - Total buried length of ground conductor in meter	600
n - Depth of burial in meter	0.5
A _g - Grid area in sq. meter	11200
Rg - Grid resistance	0.071
Re - Earth Electrode resistance	
Grid resistance can be calculated using Eq. 55 of IEEE 80	
$R_e = \frac{\rho}{2 \times \pi \times r_e \times L_e} \left[L_e \left[\frac{4 \times r_e}{n} \right] - 1 + \frac{2 \times n \times L_e \times r_e}{\sqrt{L_e}} (\sqrt{L_e} - 1) \right]$	
p - Soil resistivity in Ω-meter, I.G. 90	11
n - No. of earth electrodes	6
L _e - Length of earth electrode in meter	6.5
r _e - Diameter of earth electrode in meter	0.020
k - Co-efficient	1
A - Area of grid in square metre	11200
Re - Earth Electrode resistance	4.04156
Grounding system resistance	
Grounding system resistance can be calculated using equation 53 of IEEE 80 as follows	
$R_s = \frac{R_g \times R_e + R_g^2}{R_g + R_e + 2R_g R_e}$	
R _s - Mutual ground resistance between the group of ground conductors, R _g and group of electrodes, R _e in Ω. Neglected R _{se} since this is for homogeneous soil	
Rs - Total earthing system resistance	0.070
The calculated resistance grounding system is less than the allowable 1 Ω value	

Lightning Calculations:

Location	1	Gwalior		
Building		Concrete, Hospital		
Type of Building		Flat Roofs (a)		
Building Length (L)		20		
Building breadth (W)		9		
Building Height (H)		7		
Risk Factor Calculation				
1 Collection Area (A _c)				
A _c	=	(L*W) + (2*L*H) + (2*W*H) + (3.14*H*H)		
		739.86		
2 Probability of Being Struck (P)				
P	=	Ac * Ng * 10 ⁻⁶		
		0.002737482		
3 Overall weighing factor				
a) Use of structure (A)	=	1.7		
b) Type of construction (B)	=	1.0		
c) Contents or consequential effects (C)	=	1.7		
d) Degree of isolation (D)	=	1.0		
e) Type of country (E)	=	0.3		
Wo - Overall weighing factor	=	A * B * C * D * E		
		0.510		
4 Overall Risk Factor				
Po	=	P * Wo		
Po	=	0.001396116		
Pa	=	10 ⁻⁴		
As per clause no. 9.7 of IS: 6651, suggested acceptable risk factor (Po) has been taken as 10 ⁻⁴				
Since Po > Pa lightning protection required.				
5 Air Terminations				
Perimeter of the building	=	2(L+W)		
	=	58	Mts.	
6 Down Conductors				
Perimeter of building	=	58	Mts.	
No. of down conductors based on perimeter	=	3	Nos.	
Hence 3 nos. of Down conductors have been selected.				
Size of Down conductor	=	20 X 2.5 mm Galvanized Steel Strip		
(As per IS:6651, lightning currents have very short duration, therefore thermal factors are of little consequence in deciding the cross section of the conductor. The minimum size of Down conductors - 20mm X 2.5 mm Galvanized Steel Strip)

Notes:

- Overall derating factor $k = k1 \times k2 \times k3 \times k4$
 - $k1$ = Derating factor for variation in ambient temperature
 - $k2$ = Derating factor for depth of laying
 - $k3$ = Derating factor for spacing between two circuits
 - $k4$ = Derating factor for variation in thermal resistivity of the soil
- LV Motors - Running Voltage Drop = 3%, Starting Voltage Drop = 15%
- Cable type:
 - TYPE 1: Al Conductor, XLPE Insulated, Armoured, PVC outer sheathed
 - TYPE 2: Cu Conductor, XLPE Insulated, Armoured, PVC outer sheathed
- Effect of Frequency Variation $\pm 5\%$
- Combined Effect of Voltage & Frequency Variation $\pm 10\%$

Conclusion

We have been taught many aspects of engineering activities during the EPC stages for all electrical and related other disciplines also.

Feedback

Smart Bridge

They conduct summer internships, work shops, debates, hackthons, technical sessions.

Method of conducting program

Online virtual program with presentation slides and explanation on the topic and practical usage of topic and with some examples.

Program highlights

It is for the detailed design of any industrial sectors.

Material

The material was good .

Benefits

It has been given the opportunity to learn and interact with industry experienced engineering specialist to learn the Electrical detailed design engineering for various industrial sectors.

ELECTRICAL LOAD CALCULATIONS LV MCC

Assignment 1

[illegible]

DG SIZING CALCULATIONS

Design Data

Rated Voltage 415

Power factor (Cos ϕ) 0.87

Efficiency 0.74

Total operating load on DG set in kVA at 0.87 power factor **287.3**

Largest motor to start in the sequence - load in KW 45

Running kVA of last motor (Cos ϕ = 0.91) 70

Starting current ratio of motor 6

Starting KVA of the largest motor
(Running kVA of last motor X Starting current ratio of motor) **419**

Base load of DG set in KVA
(Total operating load in kVA – Running kVA of last motor) **217**

A Continuous operation under load -P1

Capacity of DG set based on continuous operation under load P1 **217**

B Transient Voltage dip during starting of Last motor P2

Total momentary load in KVA **637**
(Starting KVA of the last motor+Base load of DG set in KVA)

Subtransient Reactance of Generator (Xd'') 7.91%

Transient Reactance of Generator (Xd') 10.065%

$X_d''' = (X_d'' + X_d')/2$ 0.089875

Transient Voltage Dip 15%

Transient Voltage dip during Soft starter starting of Last motor
 $P2 = \text{Total momentary load in KVA} \times X_d''' \times \frac{(1 - \text{Transient Voltage Dip})}{(\text{Transient Voltage Dip})}$ **324**

C Overload capacity P3

Capacity of DG set required considering overload capacity

Total momentary load in KVA **637**

overcurrent capacity of DG (K) 150%

(Ref: IS/IEC 60034-1, Clause 9.3.2)

Capacity of DG set required considering overload capacity
(P3) = $\frac{\text{Total momentary load in KVA}}{\text{overcurrent capacity of DG (K)}}$

425

Considering the last value amongst P1, P2 and P3

Continuous operation under load -P1

217

Transient Voltage dip during Soft starter starting of Last motor P2

324

Overload capacity P3

425

Considering the last value amongst P1, P2 and P3

425

Hence, Existing Generator 425 KVA is adequate to cater the loads as per re-scheduled loads

NOTE:VOLTAGE DIP CONSIDERED - 15%

Assignment-3

Calculation for Transformer Capacity

Example of calculation for Transformer Capacity

Calculation for consumed load

Consumed loads used for this example are as follows :

	kW	kVar	kVA	
a. Continuous load	218.37	182.1	284.33	--- (i)
b. Intermittent load / Diversity Factor	7.25	6.8	9.94	--- (ii)
c. Stand-by load required as consumed load	65.73	55.0	85.71	--- (iii)
Max. Consumed load = ((i) + 30% (ii) + 10% (iii)) =	227.1	189.6	295.88	
Future expansion load (20% capacity)	45.4	37.9	59.18	
Total Load =	272.5	227.6	355.06	

Calculation for 3.3kV / 0.433 kV transformer capacity

Max. Consumed load	=	295.9 kVA
Spare capacity	=	59.2 kVA
Required capacity	=	355.1 kVA
Transformer rated capacity	=	120 kVA

1.3 Voltage regulation check

During starting or reacceleration of max. capacity motor (3400 kW) , while all the other loads running , the voltage regulation is as follow

$$P_T = 355 \text{ KVA} \quad (\%Z) = 4.12 \quad \& \text{ Ratio X/R} = 3.8$$

$$\text{Hence , } \%R = 1.037 \%$$

$$\%X = 3.99 \%$$

$$P_M = 45 \text{ KW having } (K = 6 \& C = 1 \& \cos \theta = 0.78 \& \text{Eff.} \eta = 0.91 \& \cos \theta_s = 0.25$$

$$P_s = 380.389 \text{ KVA}$$

$$\cos \theta_s = 0.25, \text{Corresponding to Angle } \theta_s = 75.5225 \text{ Degrees for which } \sin \theta_s = 0.97$$

$$P_B = 263 \text{ KVA} \& \text{PB in KW is } = 223.55 \& \text{P}_B \text{ in Kvar} = 255.11 \therefore \cos \theta_B = 0.850$$

$$\cos \theta_B = 0.85, \text{Corresponding to Angle } \theta_s = 31.7883 \text{ Degrees, for which } \sin \theta_s = 0.53$$

$$P_{CP} = 318.647 \text{ KW}$$

$$P_{CQ} = 623.42 \text{ KVAR}$$

$$P_C = 700.135 \text{ KVA}$$

$$\cos \theta_c = 0.45512, \text{ where as } \sin \theta_c = 0.890$$

$$\text{Voltage Regulation } \% = 7.9 \%$$

Result: During starting of max. capacity motor, while all other loads are running , the voltage regulation at Transformer secondary terminals is approx. 5.3% , which meets the criteria to maintain less than 15% voltage regulation.

1.4 Selection of rated capacity

120 kVA transformer selected.

Assignment-4

2

Earthing calculations:

Maximum line-to-ground fault in kA for 1 sec	16
Earthing material (Earth rod & earth strip)	GI
Depth of earth flat burial in meter	0.5
Average depth / length of Earth rod in meters	4.5
Soil resistivity Ω -meter	11
Ambient temperature in deg C	55
Plot dimensions (earth grid) L x B in meters	80
Number of earth rods in nos.	6

Earth electrode sizing:

Ac - Required conductor cross section in sq.mm

$$I_{lg} = A_c \times \sqrt{\left[\frac{TCAP \times 10^{-4}}{t_c \times \alpha_r \times \rho_r} \right] \times \ln \left[\frac{K_0 + T_m}{K_0 + T_a} \right]}$$

α_r - Thermal co-efficient of resistivity, at 20 oC	0.0032
ρ_r - Resistivity of ground conductor at 20 oC	20.10
T_a - Ambient Temperature is °C	50
I_{lg} - RMS fault current in kA = 50 KA	16
t_c - Short circuit current duration sec	1
Thermal capacity factor, TCAP J/(cm ³ .oC)	3.93
T_m - Maximum allowable temperature for copper conductor, in oC	419
K_0 - Factor at oC	293

The data taken from IEEE 80-2000, Clause 11.3, Table-1 for clad steel rod:

$16 = A_c *$	0.123
Ac - Required conductor cross section in sq.mm	130
Earth rod dia in mm	13
Earth rod dia (including 25% corrosion allowance) in mm	16

Earth flat sizing:

Ac - Required conductor cross section in sq.mm

$$I_{lg} = A_c \times \sqrt{\left[\frac{TCAP \times 10^{-4}}{t_c \times \alpha_r \times \rho_r} \right] \times \ln \left[\frac{K_0 + T_m}{K_0 + T_a} \right]}$$

α_r - Thermal co-efficient of resistivity, at 20 oC	0.0032
ρ_r - Resistivity of ground conductor at 20 oC	20.10
T_a - Ambient Temperature is °C	50
I_{lg} - RMS fault current in kA = 50 KA	16
t_c - Short circuit current duration sec	1

Thermal capacity factor, TCAP J/(cm ³ .oC)	3.93
Tm - Maximum allowable temperature for copper conductor, in oC	419
K0 - Factor at oC	293
The data taken from IEEE 80-2000, Clause 11.3, Table-1 for clad steel rod:	
16 = Ac *	0.123
Ac - Required conductor cross section in sq.mm	130
Earth flat area in mm	13
Earth flat area (including 25% corrosion allowance) in mm	16
Selected flat size W * Thk in sq mm	20

Rg - Grid resistance

Grid resistance can be calculated using Eq. 52 of IEEE 80

$$R_g = \rho \left\{ \frac{1}{L} + \frac{1}{\sqrt{20} \times A} \left[1 + \frac{1}{1 + h \sqrt{20/A}} \right] \right\}$$

ρ - Soil resistivity in Ω -meter=	11
L - Total buried length of ground conductor in meter	440
h - Depth of burial in meter	0.5
A - Grid area in sq. meter	11200

Rg - Grid resistance 0.071

Rr - Earth Electrode resistance

Grid resistance can be calculated using Eq. 55 of IEEE 80

$$R_r = \frac{\rho}{2 \times \pi \times n_r \times L_r} \left\{ l_n \left[\frac{4 \times L_r}{b} \right] - 1 + \frac{2 \times k_1 \times L_r}{\sqrt{A}} \left(\sqrt{n_r} - 1 \right)^2 \right\}$$

ρ - Soil resistivity in Ω -meter, 16.96	11
n - No of earth electrodes	6
L_r - Length of earth electrode in meter	4.5
b - Diameter of earth electrode in meter	0.020
k_1 - co-efficient	1
A - Area of grid in square metre	11200

Rr - Earth Electrode resistance 4.04156

Grounding system resistance

Grounding system resistance can be calculated using equation 53 of IEEE 80 as follows:

$$R_g \times R_2 - R_m^2$$

$$R_s = \frac{R_g + R_r}{2 - 2R_m}$$

R_m - Mutual ground resistance between the group of ground conductors, R_g and group of electrodes, R_r in Ω . Neglected R_m , since this is for homogenous soil

R_s - Total earthing system resistance 0.070

The calculated resistance grounding system is less than the allowable 1 Ω value.

Assignment-5

Lightning calculations:

Location	1	2	3
Building	Mangalore	Bangalore	Visakhapatnam
Type of Building	Concrete, Industrial	Structural, Industrial	Concrete, Hospital
Building Length (L)	Flat Roofs (a)	Triangle Roofs (c)	Flat Roofs (a)

Nizamabad
Concrete, Hospital
Flat Roofs (a)
12
7
9

Location	Gwalior
Building	Concrete, Hospital
Type of Building	Flat Roofs (a)
Building Length (L)	20
Building breadth (W)	9
Building Height (H)	7

Risk Factor Calculation

1 Collection Area (A_c)

$$A_c = \frac{(L * W) + (2 * L * H) + (2 * W * H)}{739.86}$$

2 Probability of Being Struck (P)

$$P = \frac{A_c * N_g * 10^{-6}}{0.002737482}$$

3 Overall weighing factor

$$\begin{aligned} \text{a) Use of structure (A)} &= 1.7 \\ \text{b) Type of construction (B)} &= 1.0 \\ \text{c) Contents or consequential effects (C)} &= 1.7 \\ \text{d) Degree of isolation (D)} &= 1.0 \\ \text{e) Type of country (E)} &= 0.3 \\ \text{Wo - Overall weighing factor} &= A * B * C * D * E \\ &= 0.510 \end{aligned}$$

4 Overall Risk Factor

$$\begin{aligned} P_o &= P * W_o \\ P_o &= 0.001396116 \\ P_a &= 10^{-5} \end{aligned}$$

As per clause no. 9.7 of BS- 6651, suggested acceptable risk factor (P_o) has been taken as 10^{-5}
Since $P_o > P_a$ lightning protection required.

5 Air Terminations

$$\begin{aligned} \text{Perimeter of the building} &= 2(L+W) \\ &= 58 \quad \text{Mts.} \end{aligned}$$

6 Down Conductors

$$\begin{aligned} \text{Perimeter of building} &= 58 \quad \text{Mts.} \\ \text{No. of down conductors based on perimeter} &= 3 \quad \text{Nos.} \end{aligned}$$

Hence 3 nos. of Down conductors have been selected.

Size of Down conductor = 20 X 2.5 mm Galvanized Ste
(As per BS6651, lightning currents have very short duration, therefore thermal factors are of little consequence in deciding the cross-section of the conductor. The minimum size of Down conductors - 20mm X 2.5 mm Galvanized Steel Strip
